About Me

I am a third-year Engineering student specializing in Data Science at New Horizon College of Engineering, Bangalore. I am passionate about data analysis and AI technologies, and eager to gain hands-on experience through an internship. I am a quick learner, team-oriented, and motivated to apply my skills to real-world problems.

PROJECTS

Personality Building using Big Five Traits

Developed a project based on the Big Five personality traits model to analyze personality characteristics using user input data. The project focused on trait classification and basic data analysis to generate personality insights.

ShopSnap – Price Comparison Website

Developed a web-based price comparison platform that collects and compares product prices from multiple online sources to help users find the best deals. The project focused on data retrieval, comparison logic, and a user-friendly interface.
